Subject: Missing Reports choices from Alpine not included on Masters race

Type: enhancement

Importance: medium

Description:

There are several reports supported for Alpine are not included on the Reports choices for a masters race which are commonly used for producing TD reports and results packets. These would be very helpful to have available.

Need the ***Transmittal Sheet*** report included on masters race. *[pointed out by Esther delli Quaddri]*

Would like an Overall Results report with the competitor summary DNS, DSQ, DNF counts – this makes it much easier to create the TD report.

[Note: latter came from Meri Stratton several years ago – not sure exactly which report she's referring to, there isn't one on alpine that I can find that's specifically titled "Overall Results" – maybe means Race Results. She describes having to switch the race to alpine, run the report, then hunt down a "pdf from USSA" to get at competitor classification counts]

Other Alpine reports that might be useful to expose on Masters race: TD Audit Report, Notes report

Workaround:

The RA can get these reports by flipping over to Alpine, but the procedure is somewhat error-prone and a bit tedious.

Change the Race setting from ***Masters Alpine*** to ***Alpine*** on the Header tab; be sure to reset the Event choice to the correct race type, as this setting is not preserved and always reverts to the first value (which is DH for Alpine and Masters Alpine). Run the desired report.

Change the Race setting back to ***Masters Alpine***, remembering again to reset the Event choice to the correct race type.
